

## **Lead BLOCKCHAIN and BACKEND DEVELOPER**

Using Blockchain technologies We have created a new financial platform for modern assets. We are offering Custody services and Institutional grade multi-signature business wallet for our customers (financial institutions, funds, exchanges, lending platforms and more).

xDaro is a kind of technology unicorn. If You are talanted and can hold tight this ride then join now!

We are looking for an experienced person with the ability to plan architecture and write scalable code. You will be responsible for developing technology to support business requirements across different markets.

### **Responisbilties**

- Plan the architectural design of new functionalities and/or integrations within the xDaro platform.
- Split the requirements into logical development tasks and delegate the tasks among developers within the existing development team.
- Participate in expanding the IT team's technical knowledgebase and growth.
- Work within the team to implement existing and planned requirements.
- Evaluate your own deliveries as well as the deliveries of other developers.
- Provide constructive feedback and ensure the final deliveries are up to xDaro and software development standards.
- Report directly to business managers who have extensive experience in IT processes and business.

### **Requirements**

- At least 5 years' experience and proven track record working with complex backend systems.
- Proven experience working with Blockchain platforms (network nodes, integrations, explorers, wallets) will be considered as a huge advantage.
- Strong understanding of design patterns for the architecture of large scale backend applications – REST APIs, Algorithms, Caching techniques etc.).
- Experience working with relational databases such as PostgreSQL, MySQL, Oracle (preferably).
- You are a top-level backend engineer who can deliver lean Node.js code that performs well at scale.
- Experience working with Docker.
- Ability to work with Angular 2+, PHP, Python, Vagrant, Redis, RabbitMQ, React Native, Typescript, Git, HTML5, SCSS, Unix.
- Experience working with AWS, Azure.

### **Top requirement**

- Ability to take full ownership and responsibility of own work.

- Not to be afraid make mistakes and test limits of the sky (We have created special sandbox for that).

**We offer**

- Interesting job and regular salary with different bonuses.
- International exposure to many countries where we work with multiple large-scale projects in parallel and do multiple deployments every month. This could involve some travel abroad.

**Compensation**

Annual salary (gross) from 25 000 EUR to 60 000 EUR.

If You see Yourself in this position, please send Your CV with short motivation letter attached.
